The novel MCDM approach PROMETHEE-mGqNN (PROMETHEE under m-generalised q-neutrosophic numbers) is proposed in this paper as the solution to the described problem. Five criteria that might be automatically calculated from the in-game data are proposed to construct the decision matrix to identify the untrustworthy respondents. the hiding place questions and answers: Hierarchy T. F. H. Allen, Thomas B. Starr, 2017-11-10 Ecosystems are incredibly complex, non-linear structures and self-organized entities; they cannot be described by simple models or by statistical approaches. Within each ecosystem are scores of individuals interacting continuously with others and with their biotic and abiotic surroundings, over vast geographic spaces, and over varying time scales as well. To approach the enormity of this complexity, ecologists have developed tools to simplify and aggregate information, and among them is Hierarchy Theory. Instead of analyzing the whole structure to understand the functions of the system, Hierarchy Theory analyzes hierarchical levels only and the interactions between them. It draws upon two different paradigms of complexity, reductionism and holism, adapting the most useful features of each into a viable means of studying ecosystems. It reduces the amount of data the researcher has to deal with, and it explicitly considers the relevant entities and interconnections of a larger complex system according to a specific research question. Originally published in 1982, Hierarchy was the first book to apply the tool to ecological systems. In the three decades since its publication, the work has influenced myriad large scale research initiatives in ecology, and this new, thoroughly revised edition reflects the assimilation of the theory in ecological research, and its successful application to the understanding of complex systems.

the hiding place questions and answers: Arthur Conan Doyle's Art of Fiction Nils Clausson, 2019-01-22 This groundbreaking book rescues Arthur Conan Doyle from the sub-literary category of popular fiction and from the myth of Sherlock Holmes. Instead of following new historicists and postcolonialists and asking what Conan Doyle's fiction reveals about its author and what it tells us about Victorian attitudes to crime, class, Empire and gender, this provocative and convincingly argued literary study shifts the critical emphasis to the neglected art of the novels, tales and stories. It demonstrates through close reading that they can be read the same way as canonical literary fiction. Unapologetically polemical and written in an accessible, jargon-free style, this book will stimulate debate and provoke counterarguments, but most importantly it will send readers, both within and outside the academy, back to the fiction with heightened understanding and renewed pleasure. At a time when evaluation has virtually disappeared from literary studies, this iconoclastic book returns it to the centre.
