alice in wonderland jr script: Beyond Broadway Professor Stacy Wolf, 2019-11-15 The idea of American musical theatre often conjures up images of bright lights and big city, but its lifeblood is found in amateur productions at high schools, community theatres, afterschool programs, summer camps, and dinner theatres. In *Beyond Broadway*, author Stacy Wolf looks at the widespread presence and persistence of musical theatre in U.S. culture, and examines it as a social practice--a live, visceral experience of creating, watching, and listening. Why does local musical theatre flourish in America? Why do so many Americans continue to passionately engage in a century-old artistic practice that requires intense, person-to-person collaboration? And why do audiences still flock to musicals in their hometowns? Touring American elementary schools, a middle school performance festival, afterschool programs, high schools, summer camps, state park outdoor theatres, community theatres, and dinner theatres from California to Tennessee, Wolf illustrates musical theatre's abundance and longevity in the U.S. as a thriving social activity that touches millions of lives.

alice in wonderland jr script: The Vertebrate Integument Volume 2 Theagarten Lingham-Soliar, 2015-02-18 The emphasis in this volume is on the structure and functional design of the integument. The book starts with a brief introduction to some basic principles of physics (mechanics) including Newton's Three Laws of Motion. These principles are subsequently used to interpret the problems animals encounter in motion. It is in only the last 40 or so years that we have begun to understand how important a role the integument plays in the locomotion of many marine vertebrates. This involves the crossed-fiber architecture, which was first discovered in a classic study on nemertean worms. As a design principle we see that the crossed-fiber architecture is ubiquitous in nature. Research on some of the most dynamic marine vertebrates of the oceans - tuna, dolphins and sharks, and the extinct Jurassic ichthyosaurs - shows precisely how the crossed-fiber architecture contributes to high-speed swimming and (in lamnid sharks) may even aid in energy conservation. However, this design principle is not restricted to animals in the marine biota but is also found as far afield as the dinosaurs and, most recently, has been revealed as a major part of the microstructure of the most complex derivative of the integument, the feather. We see that a variety of phylogenetically diverse vertebrates take to the air by using skin flaps to glide from tree to tree or to the ground, and present detailed descriptions of innovations developed in pursuit of improved gliding capabilities in both extinct and modern day gliders. But the vertebrate integument had even greater things in store, namely true or flapping flight. Pterosaurs were the first vertebrates to use the integument as a membrane in true flapping flight and these interesting extinct animals are discussed on the basis of past and cutting-edge research , most intriguingly with respect to the structure of the flight membrane. Bats, the only mammals that fly, also employ integumental flight membranes. Classic research on bat flight is reviewed and supplemented with the latest research, which shows the complexities of the wing beat cycle to be significantly different from that of birds, as revealed by particle image velocimetry. The book's largest chapter is devoted to birds, given that they make up nearly half of the over 22,000 species of tetrapods. The flight apparatus of birds is unique in nature and is described in great detail, with innovative research highlighting the complexity of the flight structures, bird flight patterns, and behavior in a variety of species. This is complimented by new research on the brains of birds, which shows that they are more complex than previously thought. The feather made bird flight possible, and was itself made possible by β -keratin, contributing to what may be a unique biomechanical microstructure in nature, a topic discussed in some depth. A highly polarized subject concerns the origin of birds and of the feather. Alleged fossilized protofeathers (primal simple feathers) are considered on the basis of histological and

taphonomic investigative studies in Chapter 6. Finally, in Chapter 7 we discuss the controversies associated with this field of research. Professor Theagarten Lingham-Soliar works at the Nelson Mandela Metropolitan University, Port Elizabeth and is an Honorary Professor of Life Sciences at the University of KwaZulu-Natal.

alice in wonderland jr script: *Film Nation* James R Russo, 2021-08-22 Notable writers on literature and culture who occasionally penned opinion pieces on the movies prior to World War II include Clifton Fadiman, Mark Van Doren, Lincoln Kirstein, Edmund Wilson, Louise Bogan, and Paul Goodman. All of these critics wrote seriously about things other than the movies. Indeed, the early decades of film criticism drew many moonlighters who tried their hand at it for a few years, then moved on to their preferred metier. And such was the case with William Troy (1903-1961). Troy, a distinguished literary critic whose posthumous *Selected Essays* won a National Book Award in 1968, was also a much-loved professor at Bennington College, the New School, and New York University. Troy was the film critic of *The Nation* from 1933 to 1935. To that post he brought an educated, almost professional tone, which he sometimes used for comic effect. He approached each piece of film criticism as an occasion for some larger essayistic rumination. Indeed, his feeling for the carpentry of the short review is superb, as the reader will detect in his pieces on such important films as Buñuel's *L'age d'Or*, Lang's *M*, Duvivier's *Poil de Carotte*, Eisenstein's *Que Viva México!*, Dreyer's *The Passion of Joan of Arc*, Cocteau's *Blood of a Poet*, Pudovkin's *Mother*, Flaherty's *Man of Aran*, Renoir's *Madame Bovary*, and Ford's *The Informer*. William Troy was thus one of America's first full-time professional film critics, if not the best of the lot. He deserves some of the attention heretofore reserved for another important early critic, James Agee, who himself began writing movie reviews for *The Nation* in 1942. Published in conjunction with *The Bookman: William Troy on Literature and Criticism, 1927-1950* (ISBN 978-1-78976-172-6), *Film Nation* is essential reading for cinephiles. Inclusion of a substantive index makes the work highly attractive for classroom adoption in the field of cinema studies.

alice in wonderland jr script: Movie-Made Los Angeles John Trafton, 2023-10-17 Explores the proto-cinematic visual culture of Los Angeles that set the scene for modern Hollywood. Los Angeles was a cinematic city long before the rise of Hollywood. By the dawn of the twentieth century, photography, painting, and tourist promotion in Southern California provided early filmmakers with a template for building a myth-making business and envisioning ideal moviegoers. These art forms positioned California as a land of transformative experiences and catapulted the dusty backwater town of Los Angeles to the largest city on the west coast by 1915. Photography aided the Southern Pacific Railroad Company in opening the region to the rest of nation. Painters gave traditions that were fading in Europe a new lease on life in the California sun, with signature colors and techniques that would be adopted by L.A. real estate companies, agribusiness, and health retreats. Tourism infused the iconography and signature styles of art with cultural mythology of the state's colonial past, offering proto-cinematic experiences to those who ventured west. Author John Trafton explores how Hollywood, an industry based on world-building, was the product of these art forms in the land of sunshine. A more complete story of the American film industry's ascendancy in Los Angeles emerges when one considers how the City of Angels cultivated its self-image through pre-cinema narrative art.
