IoT and Cloud systems have prompted the development of a Cloud digital ecosystem referred to as Cloud-to-thing continuum computing. The key success of IoT computing and the Cloud digital ecosystem is that IoT can be integrated seamlessly with the physical environment and therefore has the potential to leverage innovative services in agro-ecosystems. Areas such as ecological monitoring, agriculture, and biodiversity constitute a large area of potential application of IoT and Cloud technologies. In contrast to traditional agriculture systems that have employed aggressive policies to increase productivity, new agro-ecosystems aim to increase productivity but also achieve efficiency and competitiveness in modern sustainable agriculture and contribute, more broadly, to the green economy and sustainable food-chain industry. Fundamental research as well as concrete applications from various real-life scenarios, such as smart farming, precision agriculture, green agriculture, sustainable livestock and sow farming, climate threat, and societal and environmental impacts, is presented. Research issues and challenges are also discussed towards envisioning efficient and scalable solutions to agro-ecosystems based on IoT and Cloud technologies. Our fundamental belief is that we can collectively trigger a new revolution that will transition agriculture into an equitable system that not only feeds the world, but also contributes to mitigating the climate change and biodiversity crises that our historical actions have triggered.

The peculiar characteristics of Shanzhai Model may be attributed to the government policy guidance, from macroeconomic level, to technology development level, and to market expansion level, through the regulated cycle process of CCP government 'Five-Year-Plan'. Such a dynamic process of government policy system determines the dynamisms of China economy, industry and enterprises, linking the previous weaknesses into the upgrade or rectification of the next five-year-plan, forcing enterprises to obligately upgrade or adjust their business and management operations (given the absolute autocracy of China government). Practically, the imitation-based cost-saving operations on the enterprise level, the 'Wolf Like' clustered industry-chain operations organized by the principle of 'Risks-Resources-Benefits Sharing' on the industry level, and the 'Price-to-Performance' products advantages on the market level - together, they have been contributing to the leapfrog of China economy, by taking advantages of increasingly globalized business environment and the network (Internet) information technology system, turning China into an economic Shanzhai, corruption Shanzhai, and a political Shanzhai, imposing the 'One Belt One Road' hegemonism on the harmony of international community. Most studies leave out a very important part of the system--the marketing channel. That is why Laurens van der Laan developed and wrote this book, *The Trans-Oceanic Marketing Channel*. To help you understand what happens to export crops, such as cocoa, coffee, cotton, groundnuts, tea, and tobacco, between their country of origin and consumer markets, this book analyzes the roles of different actors in trans-oceanic trade, inherent differences between world markets, export diversification policies, and the commercial and institutional forces at play. *The Trans-Oceanic Marketing Channel* will give you a strong background in marketing channel concepts, and because of its focus on the exporter rather than on the government, it will provide you with an excellent model for microanalysis. As you read about the special features of trans-oceanic trade, you will also learn about: trade associations and their role in shaping world markets for trans-oceanic crops the uneasy relationship between exporters and shipping companies the selling conduct of agricultural exporters in Africa the tendency of actors in Africa to accelerate the trans-oceanic product flow the effectiveness of export marketing boards as channel leaders private enterprise, the chief agent of development the theory of "exporter preference" *The Trans-Oceanic Marketing Channel* invites policymakers, international businessmen, professors, and students to examine the opportunities, problems, and policies that

confront the various players in trans-oceanic trade, especially the exporters. As the book discusses the divergent institutional arrangements in the world markets for agricultural products and their differential effect on African exports, you will become keenly aware of how vertical marketing systems differ from conventional marketing channels. No other book brings together the three fundamental sections of export agriculture, the country of production, the channel through which the products flow, and the country of destination, to provide you with a complete understanding of trans-oceanic marketing.
