Sleeter, 2012 This book reports an ethnographic study of thirty teachers from eighteen schools who participated in a staff development programme in multicultural education. Although most of the teachers reported learning a good deal, changes in their teaching and their discussions of teaching were fairly limited. After reporting the data, the book examines why changes were limited, analyzing three areas: the nature of staff development and how multicultural education was packaged; the structure of schools as institutions; and the identities and life experiences of teachers as White women, often from working class backgrounds.

Randy Fletcher, 2012-12-06 This volume is derived from presentations given at a conference hosted in Boulder, Colorado in honor of the 60th birthday of Walter Kintsch. Though the contents of the talks, and thus the chapters, varied widely, all had one thing in common -- they were inspired to some degree by the work of Walter Kintsch. When making plans for an edited book centered around this conference, the editors had a primary goal: to acknowledge the wide variety of researchers and research areas Kintsch had influenced. As a consequence, one of the more unusual elements of this volume is the diversity of the contributors. Researchers from six different countries contributed chapters to this book which is loosely organized around three main thrusts of Kintsch's work: * text-based representations that explain how meaning in a text is constructed, * situation models which represent what the text is about rather than what a text literally says, and * the construction-integration model, Kintsch's most recent work in discourse comprehension.
