communication pathways 2nd edition free: What We Want Is Free, Second Edition Ted Purves, Shane Aslan Selzer, 2014-07-07 Explores how contemporary artists use gifts, barter, and other forms of nonmonetary exchange as a means and medium of artistic production. This revised

edition of *What We Want Is Free* examines a twenty-year history of artistic productions that both model and occupy the various forms of exchange within contemporary society. From shops, gifts, and dinner parties to contract labor and petty theft, contemporary artists have used a variety of methods that both connect participants to tangible goods and services and, at the same time, offer critiques of and alternatives to global capitalism and other forms of social interaction. Examples of these various projects include the creation of free commuter bus lines and medicinal plant gardens, the distribution of such services as free housework or computer programming, and the production of community media projects such as free commuter newspapers and democratic low-wattage radio stations. Like the first edition, the second edition includes a detailed survey of artists' projects from around the globe, as well as critical essays and artists' texts that explore the underlying social history and contemporary issues that further inform our reading of these works. This new edition also features a new introduction and additional chapters on the relation of exchange practices to democracy, the commons, object-oriented philosophy, and an examination of the impact of ongoing globalization on the economics of artists' projects. It also features a significantly expanded scope for the project histories, including work from the past decade and a new section dedicated to artist-initiated organizations and innovative models for new institutions. Praise for the First Edition

□ If you are an artist, read this book. No matter how you define and structure your practice, the essays within *What We Want Is Free* will lead you to consider important questions about how you work and what kind of life a project can lead. □ □ Nailed Magazine

communication pathways 2nd edition free: *Making Ocean Policy* Francis W. Hoole, 2019-03-12 Written in response to the increasing interest in the making of ocean policy, this collection of original articles surveys the history of U.S. ocean policy, ocean policy advocacy, and the struggle within government to determine how best to develop and implement a sensible ocean policy. The increasing complexity of the issues, programs, and policies related to marine and coastal zone matters and the increasing number of government agencies and interest groups formed to deal with these matters reflect the growing awareness of their importance. But, reflect the editors, in an enormously complex world, where many interests are in conflict and where information is tentative and incomplete—yet often overwhelmingly abundant—there are few easy solutions to ocean policy problems.

communication pathways 2nd edition free: APOPTOSIS INDUCTION/SUPPRESSION: A FEASIBLE APPROACH FOR NATURAL PRODUCTS TO TREATMENT OF DISEASES, 2nd Edition Hong Zhang, Hailing Xin, Wei Peng, Khalid Rahman, 2025-01-23 This Research Topic is part of a series. See also: Apoptosis Induction/Suppression: A Feasible Approach for Natural Products to Treatment of Diseases, Volume II. Apoptosis is generally recognized as a form of programmed cell death, which is beneficial for normal cell development, organ growth and tissue homeostasis in multicellular organisms. In normal conditions, millions of cells would indeed die and proliferate every day in the human body. However, an imbalance between cell death and proliferation can lead to some serious diseases. Two different case scenarios can be distinguished: 1) uncontrolled cell proliferation and insufficient cell apoptosis would lead to various cancer types and autoimmune diseases (e.g. rheumatoid arthritis, lupus erythematosus, etc.); 2) excessive apoptosis in normal cells, e.g. neural cells or cardiomyocytes, would result in neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, and Huntington's disease) and ischemia injuries (myocardial infarction, stroke, etc.), respectively. Natural products from plants, animals, microorganisms and minerals are potentially important resources in the context of drug discovery for various diseases. Importantly, increasing scientific evidence has suggested that apoptosis induction or suppression might be one of the predominant molecular mechanisms whereby natural products could be used to treat diseases, especially cancer, rheumatoid arthritis, Alzheimer's disease, Parkinson's disease, stroke, etc. However, not much is known about the detailed molecular mechanisms underlying apoptosis induction or suppression, including signaling pathways, novel and key pharmacological targets as well as the action of specific active substances extracted from plants, etc. In addition, lots of active natural products based on apoptosis regulation have already received drug regulatory approvals (e.g. taxol, camptothecin and sinomenine) and been used as clinical drugs to treat diseases; furthermore, there are many other natural products in the stages of the clinical investigations. However, the related advance and update of the current drug development correlated to apoptosis induction or suppression, systematic reviews or meta-analysis of these clinical drugs or candidate drugs in clinical research stage are insufficient. This Research Topic will provide an academic platform to discuss how natural products can be used to treat several types of diseases via apoptosis induction/suppression. We invite authors to contribute original research and review articles testing the action of natural bioactive products on various diseases through apoptosis regulation (including induction and suppression). We aim to particularly focus on the recent advances in the curative properties of natural products on cancers, tumors, autoimmune diseases, neurodegenerative diseases and cardiac diseases through apoptosis regulation, and new natural bioactive agents for controlling diseases via regulating apoptosis. Potential topics will include but won't be limited to the following: 1) Advance in curative properties of natural products on diseases via apoptosis regulation; 2) Advance and update of the current drug development correlated to apoptosis induction or suppression; 3) Novel natural products with curative activities via apoptosis induction, in particular for cancers/tumors, rheumatoid arthritis and lupus erythematosus; 4) Novel natural products with curative activities via apoptosis suppression, in particular for neurodegenerative diseases (Alzheimer's disease, Parkinson's disease, and Huntington's disease) and ischemia injury (myocardial infarction, stroke); 5) Novel signal molecules for the apoptosis-related signal pathway; 6) Systematic reviews or meta-analysis of the approved natural drugs or candidate natural drugs in clinical

research stage with induction or suppression of apoptosis. The four pillars of best practice in ethnopharmacology With these guidelines we define in detail what constitutes best practice for manuscripts submitted to *Frontiers in Pharmacology*; Section Ethnopharmacology. They provide a basis for the peer review and build on the general requirements of *Frontiers in Pharmacology*.

1) Pharmacology

a) The manuscript (MS) must report a substantive body of ethnopharmacological research, to be considered as an independent addition to the literature. In general, we expect that such studies are based on local / traditional uses of plants or other natural substances which need to be spelled out clearly.

b) For pharmacological studies, the model used must be one which is either generally accepted in the field as valid or a credible alternative whose general development, and application in the reported instance, has been justified. Specifically antioxidant activity must be based on a pharmacologically relevant *in vivo* or cell based model. Simple *in silico* and pharmacologically irrelevant assays for antioxidant activity (e.g. the DPPH assay, FRAP (Ferric Reducing Ability of Plasma), ABTS (2,2'-azinobis-(3-ethylbenzothiazoline-6-sulfonic acid))) are not acceptable as a main tool for assessing an extract or a compound for activity.

c) Similarly, simple screening for anti-microbial effects of crude extracts is no longer state-of-the-art. Authors must follow the widely accepted standards for microbiological testing (cf. Cos et al. 2006 Anti-infective potential of natural products: How to develop a stronger *in vitro* 'proof-of-concept' *Journal of Ethnopharmacology* 106: 290–302) and subsequent methods papers. Such research is only meaningful if it contributes to our mechanistic understanding of anti-microbial effects, its specificity or identifies novel leads.

d) The dose ranges must be therapeutically relevant. While it will be impossible to define an exact cut-off, the literature in the field is now replete with studies which test extracts at implausibly high doses. Single dose studies will only be of relevance in exceptional circumstances (e.g. in case of specific complex pharmacological models). And of course, positive and negative controls must be included.

e) In order to establish therapeutic benefits, selectivity data are essential. How specific is the effect? Many compounds have non-selective *in vitro* effects and research on common compounds must be justified in terms of the potential therapeutic benefits. While such research may be relevant and have potential applications, authors will need to assess the specificity of a single compound or an extract rich in a well-studied compound (like rutin, curcumin, or quercetin) and provide evidence for the relevance and novelty of the approach.

f) Docking studies must be justified with affinity experiments, or other well established experimental methods to support a proposed mechanism of action. Algorithmic docking studies will not be accepted; these indicate if a compound will fit into a binding site but do not indicate the binding affinity or the ability to induce a conformational change.

2) Composition:

a) Botanical: The identification of the study material must be described well. All species are fully validated using Kew MPNS portal or The Plant List initiative or Plants of the World Online. Of course, full botanical documentation is essential (i.e. a voucher specimen deposited in a recognised herbarium). A scan of the voucher(s) is welcome as supplementary material and encourage authors to include the coordinates of the location where the material had been collected.

b) Chemical - The composition of the study material must be described in sufficient detail. Chromatograms with a characterisation of the dominating compound(s) are preferable. If preparations are used which are available commercially quality parameters provided in pharmacopoeia must be provided. The material under study must be characterised using the methods of the relevant monograph - If 'pure' compounds are used sufficient information on the level of purity must be included. Especially in *in vitro* models, the authors must be confident that the compounds are stable under the conditions used (for example, they do not degrade due to high concentrations of DMSO). A critical aspect that should be considered is how these assays and extraction protocols are linked to local and traditional uses. In this way, variables such as the solubility of the compound in the traditional preparation and in the analytical extraction protocol should be taken into consideration - All chemical line structures must be drawn using an internationally accepted structure drawing programme, must be consistent and - if possible and relevant - the stereochemistry needs to be given.

c) Multiherbal preparations: Very often multiherbal preparations are used. Full information on their composition (in terms of the botanical drugs /

species included) and information on the rationale for studying this preparation needs to be included. It is essential that in these cases sufficient details are provided on the botanical (2a) and chemical (2b) characterisation. 3) Basic requirements and research ethics Frontiers has very well developed guidelines relating to ethical aspects of a MS. Specifically, for Frontiers in Pharmacology (Ethnopharmacology) the following key requirements are essential: a) The objectives of the research reported must be spelled out clearly and in detail. All MS must critically assess the scientific basis of the work and provide meaningful conclusions, which are based on a clear hypothesis / research question as defined in the introduction. Ethnopharmacological research must assess whether a compound or plant extract has a certain effect and it cannot be about 'confirming an extract's or compound's effects or efficacy'. b) Research must add new and scientifically substantive knowledge to our understanding of the pharmacology and use of medicinal plants. A key basis for this is a review of literature relevant to the pharmacological activity already reported on the species including possibly related taxa or compounds. This must be up-to-date, and clearly demonstrate the substantive addition to the literature the MS submitted represents. Simply using advanced measurements/techniques/protocols reproducing previous studies of the same plant product will only be accepted in exceptional circumstances (e.g. previously unknown, highly active components are discovered). c) Compliance with all international ethical standards is essential. In the context of ethnopharmacology, the Convention on Biological Diversity and, most recently, the Nagoya Protocol are of particular relevance (<https://www.cbd.int/abs/>). d) Research in ethnopharmacology is based on local and traditional knowledge often passed on orally over generations. Ultimately, research in this field must therefore benefit those populations who are or were the original keeper of this knowledge. e) The use of animals must be justified in the context of novelty (see also part 1). It is ethically not acceptable to have yet another in vivo study on an already well-studied species, demonstrating some common activity (e.g. an anti-inflammatory effect studied in the rat-paw edema). The same is true for species which are chemically very similar (and generally are rich in common ingredient) to ones already studied pharmacologically. Such studies must 'meet(s) the standards of rigor' we expect in ethnopharmacology as defined in the Frontiers' guidelines. 4) Other specific requirements a) Studies focusing on local and traditional uses of plants (ethnopharmacological field studies) must be based on substantial, original data. The relevance of the MS in the context of previous studies in the geographical region must be spelled out clearly and it must contribute to the understanding of the therapeutic uses of plant species and inform experimental or clinical studies This includes an adequate presentation and discussion of the data. Also, social science centered studies (e.g. ethnobotanical studies or health system research of local and traditional medical systems) are welcome. This journal subscribes to the ConSEFS standards including any updates. b) In case of reviews, we expect clearly defined scientific aims (objectives), a comprehensive, critical and specific assessment of the relevant information linking local and other medical uses to the biomedical and bioscientific evidence. Reviews need to define future research needs and priorities. It is essential that the scientific quality of the original articles cited is assessed. If pharmacological studies are reviewed, particular attention must be paid to assessing the quality of the studies. c) Food plants are commonly reported to have pharmacological effects. Frontiers in Ethnopharmacology focuses on therapeutic benefits of such species and not on the general food/nutritional properties.

communication pathways 2nd edition free: PSYCHIC CRIMINOLOGY Whitney S. Hibbard, Raymond W. Worring, Richard Brennan, 2002-01-01 Practical and authoritative, this book is a comprehensive manual of operations for using psychics in criminal investigations. The authors base the material on several decades of personal experience and on other first-person accounts from law enforcement personnel. After establishing the need for such an operations manual, the text presents a short history of psychic criminology, outlines the different types of psychic ability pertinent to the investigator, then reviews the evidence and theories for paranormal phenomena. It then details the identification, recruitment, testing and use of psychics, with close coverage afforded methods and procedures for efficient and successful investigative work with psychics. The important role of extrasensory perception in the everyday life of the investigator also is examined. Throughout the book, the authors intersperse summaries of actual cases involving psychics to illustrate and support the topics under discussion. Following the text is a sample Intuitive Investigation Report Form useful in psychic criminology, a glossary of parapsychological terms, and a bibliography of pertinent readings. This second edition has been edited and rewritten extensively with much new and significant material added, including a section on remote viewing, a new chapter of documented case histories, and a cogent critique of the critics of paranormal functioning. The primary purpose of this second edition is the same as the first: to promote the professional use of psychics as investigative aides in criminal investigations.
