journal of the history of philosophy: *The Uncertain Sciences* Bruce Mazlish, 2017-07-28 This sweeping inquiry into the present condition of the human sciences addresses the central questions: What sort of knowledge do the human sciences claim to be offering? To what extent can that knowledge be called scientific? and What do we mean by scientific in such a context? In this wide-ranging book, one of the most esteemed cultural historians of our time turns his attention to major questions about human experience and various attempts to understand it scientifically. Mazlish considers the achievements, failings, and possibilities of the human sciences--a domain that he broadly defines to include the social sciences, literature, psychology, and hermeneutic studies. In a rich and original synthesis built upon the work of earlier philosophers and historians, Mazlish constructs a new view of the nature and meaning of the human sciences. Starting with the remote human past and moving through the Age of Discovery to the present day, Mazlish discusses the sort of knowledge the human sciences claim to offer. He looks closely at the positivistic aspirations of the human sciences, which are modeled after the natural sciences, and at their interpretive tendencies. In an analysis of scientific method and scientific community, he explores the roles they can or should assume in the human sciences. His approach is genuinely interdisciplinary, drawing upon an array of topics, from civil society to globalization to the interactions of humans and machines.

journal of the history of philosophy: *Aristotle's Syllogism and the Creation of Modern Logic* Lukas M. Verburgt, Matteo Cosci, 2023-01-26 Offering a bold new vision on the history of modern logic, Lukas M. Verburgt and Matteo Cosci focus on the lasting impact of Aristotle's syllogism between the 1820s and 1930s. For over two millennia, deductive logic was the syllogism and syllogism was the yardstick of sound human reasoning. During the 19th century, this hegemony fell apart and logicians, including Boole, Frege and Peirce, took deductive logic far beyond its Aristotelian borders. However, contrary to common wisdom, reflections on syllogism were also instrumental to the creation of new logical developments, such as first-order logic and early set theory. This volume presents the period under discussion as one of both tradition and innovation, both continuity and discontinuity. Modern logic broke away from the syllogistic tradition, but without Aristotle's syllogism, modern logic would not have been born. A vital follow up to *The Aftermath of Syllogism*, this book traces the *longue durée* history of syllogism from Richard Whately's revival of formal logic in the 1820s through the work of David Hilbert and the Göttingen school up to the 1930s. Bringing together a group of major international experts, it sheds crucial new light on the emergence of modern logic and the roots of analytic philosophy in the 19th and early 20th centuries.

journal of the history of philosophy: *Latin American Perspectives on Women Philosophers in Modern History* Christine Lopes, Katarina Ribeiro Peixoto, Pedro Prikladnitzky, 2022-06-21 This book presents Latin American Perspectives on women philosophers, comprising selected articles from the First International Conference of Women in Modern Philosophy that took place in Rio de Janeiro City, Brazil, Latin America, in June of 2019. The conference brought together over twenty national, transnational, and international philosophers from seven countries, whose work combines historical and analytical insight to recover the philosophical legacy of women philosophers. Historical and analytical work on women's philosophical thought constitute efforts to re-conceptualize what counts as philosophical knowledge and re-appraise the epistemic relevance of written material that women thinkers produced for most of history. This collection and the conference that gave origin to it are testimony to the enduring power of multinational and

multicultural philosophical collaboration.

The Palgrave Handbook of the History of Human Sciences offers a uniquely comprehensive and global overview of the evolution of ideas, concepts and policies within the human sciences. Rich in historical detail, the essays in this topical volume deal with such issues as laboratory experimentation, the observed transition from a post-war economics to a contemporary discipline, the contrasting positions of Friedrich Hayek and Oskar Morgenstern, the socio-economic experiments proposed by Ernest Solvay and Knut Wicksell, and a rigorous examination of the way in which economic models can or cannot be construed as valid experiments producing useful knowledge.
