sociology degree plan tamu: Gender Policy and HIV in China Joseph Tucker, Dudley L. Poston, Jr., Qiang Ren, Baochang Gu, Xiaoying Zheng, Stephanie Wang, Chris Russell, 2009-05-08 China's concentrated HIV epidemic is on the brink of becoming a generalized one and syphilis infection has become a major public health threat. Social factors relating to gender and gender inequality exacerbate the spread of HIV and sexually transmitted infections (STI) in China. A better understanding of the proximate social determinants of HIV related to gender will be crucial to effectively curbing HIV and other STIs in China. Aspects of China's governance - including

administrative procedures, the developing legal system, social institutions, and the public health infrastructure – are instrumental in shaping strategies and responses to HIV. International studies suggest that women who are more economically and socially vulnerable may also have a greater risk of HIV infection, yet few initiatives have focused on discrete areas where achievable and sustainable gender policy measures could be linked to the public health response. This study presents perspectives ranging from criminology to social psychology to better understand how gender perspectives can inform HIV policy in the context of China.

We divert water from rivers, lakes, and aquifers to our homes, workplaces, irrigation canals, and hydro-generating stations. We use it for bathing, swimming, recreation, and it functions as a symbol of purity in ritual performances. In order to facilitate and manage our relationship with water, we develop institutions, technologies, and cultural practices entirely devoted to its appropriation and distribution, and through these institutions we construct relations of class, gender, ethnicity, and nationality. Relying on first-hand ethnographic research, the contributors to this volume examine the social life of water in diverse settings and explore the impacts of commodification, urbanization, and technology on the availability and quality of water supplies. Each case study speaks to a local set of issues, but the overall perspective is global, with representation from all continents.

sociology degree plan tamu: *Queer South Rising* Reta Ugena Whitlock, 2013-03-01 *Queer South Rising: Voices of a Contested Place* is a collection of essays about the South by people who identify as both Southern and queer. The collection's name hints at the provocative nature of its contents: placing Queer and South side-by-side challenges readers to think about each word differently. The idea that a queer South might rise undermines the Battle Cry of "The South's Gonna rise Again!" embedded in the collective memory of a conservative South. This rising does not refer to a kind of Enlightenment transcendence where the region achieves some sort of distinctive prominence. It suggests instead ruptures, like furrows in a plowed field where seeds are sown. The rising Whitlock envisions is akin to breaking and turning over meanings of Southern place. The title further serves to remind readers of the complexities of the place as it calls into question notions of a universal, homogenous LGBT, queer, identity. *Queer South Rising* is the first truly interdisciplinary collection of essays on the South and queerness that deliberately aims for multiple approaches to the topics. This collection is intended for a wide audience of "regular" folks. Essays explore multiple intersections of Southern place—religion, politics, sexuality, race, education—that transcend

regional boundaries. This book counters conventional scholarly texts; it invites all readers interested in the South and queer themes to engage with the narratives it holds—and perhaps question their assumptions. Whitlock has sought, in collecting these essays, to seek out a diverse group of authors—across disciplines, professions, and interests—to shatter perceptions about a nostalgic, romanticized Southern culture in general.
