free communicable disease training online: *Preventing Occupational Exposures to Infectious Disease in Health Care* Amber Hogan Mitchell, 2020-09-22 This book is a practical guide for preventing occupational exposures to bloodborne and infectious disease in health care. It is a timely and essential resource given that people working in healthcare settings sustain a higher incidence of occupational illness than any other industry sector, and at the time of publication of this book we are in the midst of a global pandemic of COVID-19. While the guide is focused on health care primarily, it would be useful for preventing exposures to essential workers in many other industries as well. The guide offers easy-to-follow instruction, all in one place, for creating, implementing, and evaluating occupational health and safety programs. Readers have practical information that they can use now to either build a new program or expand an existing one that protects workers from occupationally associated illness and infection. With a focus on the public health significance of building better, safer programs in health care, the book provides not just the evidence-based or data-driven reasoning behind building successful programs, but also includes sample programs, plans, checklists, campaigns, and record-keeping and surveillance tools. Topics explored among the chapters include: • Occupational Safety and Health Administration (OSHA) Regulatory Compliance • Other Regulatory Requirements, National Standards, and Accreditation • Performing a Hazard Assessment and Building an Exposure Control Plan • Engineering Controls and Safer Medical Devices • Personal Protective Equipment Placement and Use • Facing a Modern Pandemic *Preventing Occupational Exposures to Infectious Disease in Health Care* is a comprehensive resource for both seasoned and novice professionals with primary, secondary, or ancillary responsibility for occupational or employee health and safety, infection prevention, risk management, or environmental health and safety in a variety of healthcare or patient care settings. It also would appeal to those working in public health, nursing, medical, or clinical technical trades with an interest in infection prevention and control and/or occupational health and infectious disease.

free communicable disease training online: *TDR annual report 2024* World Health Organization, 2025-05-09 This report highlights the impact of research supported by the UNICEF/UNDP/World Bank/WHO Special Programme for Research and Training in Tropical Diseases (TDR) to improve the health and well-being of people burdened by infectious diseases of poverty. Our work this past year has been guided by the TDR Strategy 2024-2029, which focuses on addressing four critical global health challenges: the control and elimination of diseases of poverty, the impact of climate change on health, epidemics and outbreaks, and resistance to treatment and control agents. This body of research is leading to new solutions for implementation and improved access to existing health solutions.

free communicable disease training online: *Revolutionizing Tropical Medicine* Kerry Atkinson, Prof. David Mabey, 2019-05-23 A comprehensive resource describing innovative technologies and digital health tools that can revolutionize the delivery of health care in low- to middle-income countries, particularly in remote rural impoverished communities *Revolutionizing Tropical Medicine* offers an up-to-date guide for healthcare and other professionals working in low-resource countries where access to health care facilities for diagnosis and treatment is challenging. Rather than suggesting the expensive solution of building new bricks and mortar clinics and hospitals and increasing the number of doctors and nurses in these deprived areas, the authors propose a complete change of mindset. They outline a number of ideas for improving healthcare

including rapid diagnostic testing for infectious and non-infectious diseases at a point-of-care facility, together with low cost portable imaging devices. In addition, the authors recommend a change in the way in which health care is delivered. This approach requires task-shifting within the healthcare provision system so that nurses, laboratory technicians, pharmacists and others are trained in the newly available technologies, thus enabling faster and more appropriate triage for people requiring medical treatment. This text: Describes the current burden of communicable and non-communicable diseases in low- to middle-income countries throughout the world Describes the major advances in healthcare outcomes in low-to middle-income countries derived from implementation of the United Nations/World Health Organisation's 2000 Millennium Development Goals Provides a review of inexpensive rapid diagnostic point-of-care tests for infectious diseases in low-resource countries, particularly for people living in remote rural areas Provides a review of other rapid point-of-care services for assessing hematological function, biochemical function, renal function, hepatic function and status including hepatitis, acid-base balance, sickle cell disease, severe acute malnutrition and spirometry Explores the use of low-cost portable imaging devices for use in remote rural areas including a novel method of examining the optic fundus using a smartphone and the extensive value of portable ultrasound scanning when x-ray facilities are not available Describes the use of telemedicine in the clinical management of both children and adults in remote rural settings Looks to the future of clinical management in remote impoverished rural settings using nucleic acid identification of pathogens, the use of nanoparticles for water purification, the use of drones, the use of pulse oximetry and the use of near-infrared spectroscopy Finally, it assesses the potential for future healthcare improvement in impoverished areas and how the United Nations/World Health Organization 2015 Sustainable Development Goals are approaching this. Written for physicians, infectious disease specialists, pathologists, radiologists, nurses, pharmacists and other health care workers, as well as government healthcare managers, *Revolutionizing Tropical Medicine* is a new up-to-date essential and realistic guide to treating and diagnosing patients in low-resource tropical countries based on new technologies.

free communicable disease training online: Ensuring an Infectious Disease Workforce Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2006-02-15 The Forum on Microbial Threats (previously named the Forum on Emerging Infections) was created in 1996 in response to a request from the Centers for Disease Control and Prevention (CDC) and the National Institutes of Health (NIH). The goal of the Forum is to provide structured opportunities for representatives from academia, industry, professional and interest groups, and government to examine and discuss scientific and policy issues that are of shared interest and that are specifically related to research and prevention, detection, and management of emerging infectious diseases. In accomplishing this task, the Forum provides the opportunity to foster the exchange of information and ideas, identify areas in need of greater attention, clarify policy issues by enhancing knowledge and identifying points of agreement, and inform decision makers about science and policy issues. The Forum seeks to illuminate issues rather than resolve them directly; hence, it does not provide advice or recommendations on any specific policy initiative pending before any agency or organization. Its strengths are the diversity of its membership and the contributions of individual members expressed throughout the activities of the Forum. Recent increased attention to both United States and international public health systems as well as the medical research and treatment

infrastructure has revealed significant deficiencies in their capacity to respond to infectious diseases. Medical and public health professionals may be poorly equipped to detect, diagnose, and treat common infectious diseases as well as those diseases that pose an unexpected threat. The need for the development of domestic and international training programs in the expanding field of emerging and reemerging infectious diseases is well recognized. Well-trained infectious disease professionals form the basis of a strong national healthcare system. The Forum on Emerging Infections (now renamed the Forum on Microbial Threats) convened a 2-day workshop discussion-the subject of this summary-to examine the education and training needs to ensure an adequate infectious diseases workforce. The workshop reviewed trends in research training programs and discussed the requirements for establishing successful educational initiatives and training programs to ensure a competent and prepared workforce for current and future challenges in infectious diseases. Some key disciplines explored as case-study examinations included infectious disease epidemiology, vaccinology, vector biology, and public health laboratorians.

free communicable disease training online: Report on the global arbovirus surveillance and response capacity survey 2021-2022 World Health Organization, 2025-03-14 In 2021-2022 the World Health Organization (WHO) conducted a survey to assess current surveillance and response guidelines and practices across WHO Member States to identify critical areas that require strengthening. WHO gathered data from 167 countries and territories on the structure and coverage of their arbovirus surveillance systems, laboratory and entomological capacity, clinical management capacity, epidemic preparedness, access to expertise and staffing. The survey findings confirmed that preparedness and response system attributes and stages of development differ between countries, often reflecting surveillance and response measures developed in response to endemic or epidemic Aedes-borne arbovirus circulation. In many low-resourced settings, in particular, surveillance infrastructure is unlikely to detect transmission even though competent vectors are known to be present. In 2022 WHO launched the Global Arbovirus Initiative (GLAI) for Aedes-borne arboviral diseases to strengthen the coordination, communication, capacity-building, research, preparedness and response needed to mitigate the growing risk of epidemics due to arboviral diseases. The findings of the survey have informed the objectives and priority activities of the GLAI and will serve as a baseline against which progress can be measured.

free communicable disease training online: American Prisons David Musick, Kristine Gunsaulus-Musick, 2017-05-18 Imprisonment has become big business in the United States. Using a history of ideas approach, this book examines the cultural underpinnings of prisons in the United States and explores how shared ideas about imprisonment evolve into a complex, loosely connected nationwide system of prisons that keeps enough persons to populate a small nation behind bars, razor wire and electrified fences. Tracing both the history of the prison and the very idea of imprisonment in the United States, this book provides students with a critical overview of American prisons and considers their past, their present and directions for the future. Topics covered include:

- a history of imprisonment in America from 1600 to the present day;
- the twentieth-century prison building binge;
- the relationship between U.S. prisons and the private sector;
- a critical account of

capital punishment; • less-visible prison minorities, including women, children and the elderly; and • sex, violence and disease in prison. This comprehensive book is essential reading for advanced courses on corrections and correctional management and offers a compelling and provocative analysis of the realities of American penal culture from past to present. It is perfect reading for students of criminal justice, corrections, penology and the sociology of punishment.
