hitchhikers guide to the galaxy watch: Design for Transport Mike Tovey, 2016-04-15 The central premise of *Design for Transport* is that the designer's role is to approach design for transport from the point of view of the user. People have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility. The authors show how creative designers can take a user-focused approach for a wide range of types of transport products and systems. In so doing their starting point is one of creative dissatisfaction with what is currently available, and their specialist capability is in imagining and developing new solutions which respond to that opportunity. How this is tackled varies depending on the context, and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for. The chapters cover user needs and transport, design and the transport system, transport design case studies, and the case for the automobile. A conclusion briefly signals what the future for transport design might be. Lavishly illustrated throughout in four-colour, *Design for Transport*, is an imaginative and rigorous guide to how designers can take a user-centred and socially responsible approach to tackling a range of types of transport, from systems to products and from bicycles to automobiles, demonstrating a rich array of solutions through case studies.

hitchhikers guide to the galaxy watch: *Vibrant Architecture* Rachel Armstrong, 2015-08-17 This book sets out the conditions under which the need for a new approach to the production of architecture in the twenty-first century is established, where our homes and cities are facing increasing pressures from environmental challenges that are compromising our lives and well being.

Vibrant architecture embodies a new kind of architectural design practice that explores how lively materials, or 'vibrant matter', may be incorporated into our buildings to confer on them some of the properties of living things, such as movement, growth, sensitivity and self-repair. The theoretical and practical implications of how this may occur are explored through the application of a new group of materials. Characteristically, these substances possess some of the properties of living systems but may not have the full status of being truly alive. They include forms of chemical artificial life such as 'dynamic droplets' or synthetically produced soils. As complex systems, they are able to communicate directly with the natural world using a shared language of chemistry and so, negotiate their continued survival in a restless world. Vibrant architecture may create new opportunities for architectural design practice that venture beyond top-down form-finding programs, by enabling architects to co-design in partnership with human and nonhuman collectives, which result from the production of post natural landscapes. Ultimately, vibrant architecture may operate as an ecological platform for human development that augments the liveliness of our planet, rather than diminishes it.

hitchhikers guide to the galaxy watch: Beyond Special Needs Dr Susan Hart, 1996-05-28

'Susan Hart's book is a welcome relief from the prescriptive empiricism of much current writing on how to respond to the difficulties in learning experienced by many children and young people. The detail of the sustained analysis is also in marked contrast to the superficial summarising that often passes for critique' - Support for Learning 'The author places a refreshing emphasis upon the dynamic, interactional nature of learning and teaching, reminding us of the need to recognize the active part played by all pupils in shaping their own learning, which is mediated through the agendas which they bring to bear on classroom activities and which may be quite different from those of their teachers' - International Journal of Inclusive Education This book offers practitioners a new way of thinking about and pursuing concerns about children's learning. It sets aside the limiting language of learning difficulties and special needs, and suggests an approach which starts from a different perspective. This approach assumes that any learning situation always has the potential to yield new ideas for enhancing children's learning, if we do the kinds of thinking that open up new possibilities. The author offers an account of this innovative thinking, suggesting a framework of questions that teachers can use, drawing on their existing knowledge and expertise, to generate new insight and possibilities for practice. She also provides a basis for deciding which possibilities to pursue in the case of a particular child. The approach is explained in a practical and usable way for classroom teachers, drawing on detailed accounts of children's learning and the outcomes of a research study from which the ideas were derived.
