introduction to aural rehabilitation plural publishing: Underserved Patrons in University Libraries Julia C. Skinner, Melissa Gross, 2021-01-12 This practical and research-based volume focuses on how libraries can meet the needs of underserved patrons in college and university libraries, with an emphasis on those facing trauma, abuse, and discrimination. While university libraries strive to meet the needs of all students, some groups have traditionally been overlooked. This volume engages with those underserved populations on college campuses, with an emphasis on those facing trauma, abuse, and discrimination. It brings a variety of authorial voices to discuss different aspects of that service and to share current research related to underserved populations in libraries. This combination supports research in LIS and beyond while offering concrete ways for service providers to make a difference in the lives of their patrons. Editors Skinner and Gross have both conducted extensive research in ethically meeting patron needs. They and their contributors are keenly aware of the complex and interwoven considerations that inform such service, such as patron desire for confidentiality accompanied by an urgent need for assistance. This volume is committed to sharing diverse voices in the field and to exploring the interrelationship between theoretical findings and practical applications—all in the service of underserved patrons.

introduction to aural rehabilitation plural publishing: Hearing Impairment and Hearing Disability Anthony Hogan, Rebecca Phillips, 2016-03-09 The purpose of this book is to challenge

people (service providers, people with a hearing disability and those who advocate for them) to reconsider the way western society thinks about hearing disability and the way it seeks to 'include them'. It highlights the concern that the design of hearing services is so historically marinated in ableist culture that service users often do not realise they may be participating in their own oppression within a phono-centric society. With stigma and marginalisation being the two most critical issues impacting on people with hearing disability, Hogan and Phillips document both the collective and personal impacts of such marginality. In so doing, the book brings forward an argument for a paradigm shift in hearing services. Drawing upon the latest research and policy work, the book opens up a conceptual framework for a new approach to hearing services and looks at the kinds of personal and systemic changes a paradigm shift would entail.

introduction to aural rehabilitation plural publishing: Prostheses in Antiquity Jane Draycott, 2018-09-03 Today, a prosthesis is an artificial device that replaces a missing body part, generally designed and assembled according to the individual's appearance and functional needs with a view to being both as unobtrusive and as useful as possible. In classical antiquity, however, this was not necessarily the case. The ancient literary and documentary evidence for prostheses and prosthesis use is contradictory, and the bioarchaeological and archaeological evidence is enigmatic, but discretion and utility were not necessarily priorities. So, when, how and why did individuals utilise them? This volume, the first to explore prostheses and prosthesis use in classical antiquity, seeks to answer these questions, and will be of interest to academics and students with specialist interests in classical archaeology, ancient history and history, especially those engaged in studies of healing, medical and surgical practices, or impairment and disability in past societies.
