Natural Systems David A. Chin, 2006-05-19 FOCUSING ON CONTAMINANT FATE AND TRANSPORT, DESIGN OF ENVIRONMENTAL-CONTROL SYSTEMS, AND REGULATORY CONSTRAINTS This textbook details the fundamental equations that describe the fate and transport of contaminants in the water environment. The application of these fundamental equations to the design of environmental-control systems and methodologies for assessing the impact of contaminant discharges into rivers, lakes, wetlands, ground water, and oceans are all covered. Readers learn to assess how much waste can be safely assimilated into a water body by developing a solid understanding of the relationship between the type of pollutant discharged, the characteristics of the receiving water, and physical, chemical, and biological impacts. In cases of surface runoff from urban and agricultural watersheds, quantitative relationships between the quality of surface runoff

and the characteristics of contaminant sources located within the watersheds are presented. Some of the text's distinguishing features include its emphasis on the engineering design of systems that control the fate and transport of contaminants in the water environment, the design of remediation systems, and regulatory constraints. Particular attention is given to use-attainability analyses and the estimation of total maximum daily loads, both of which are essential components of water-quality control in natural systems. Readers are provided with a thorough explanation of the complex set of laws and regulations governing water-quality control in the United States. Proven as an effective textbook in several offerings of the author's class Water Quality Control in Natural Systems, the flow of the text is carefully structured to facilitate learning. Moreover, a number of practical pedagogical tools are offered: * Practical examples used throughout the text illustrate the effects of controlling the quality, quantity, timing, and distribution of contaminant discharges into the environment * End-of-chapter problems, and an accompanying solutions manual, help readers assess their grasp of each topic as they progress through the text * Several appendices with useful reference material are provided, including current U.S. Water Quality Standards * Detailed bibliography guides readers to additional resources to explore particular topics in greater depth With its emphasis on contaminant fate and transport and design of environmental-control systems, this text is ideal for upper-level undergraduates and graduate students in environmental and civil engineering programs. Environmental scientists and practicing environmental/civil engineers will also find the text relevant and useful.

david chin water resources engineering solution manual: Handling and Management of Hazardous Materials and Waste Theodore Allegri, 2012-12-06 This book deals with the safe and legal handling of hazardous materials and waste from the manufacturer's plant through the storage, transportation and distribution channels to the user, and, ultimately, to the disposal of the product or waste materials. There is increasing pressure today from the public, academia, government at all levels, and industry to improve the handling and management of hazardous materials. A knowledge of the methods required to safely handle and manage those materials in all of their various aspects, together with an understanding of the many governmental regulations that apply to those materials in the various stages of the distribution chain, is absolutely essential to their proper handling and disposal. Efficient handling and the safe management of hazardous materials requires an expertise in the skills and techniques of the latest innovations, which in turn are often based upon the firm foundation of data and experience in those areas. Personal and public safety require that the information concerning hazardous materials be disseminated as widely as possible. This document should not be used to determine compliance with the u.s. DOT hazardous material regulations, or with any other regulations imposed by local, State, or Federal regulatory bodies. T.H. Allegri, Sr.
