This is a foundational topic needed for application to other important areas including biomechanics, musculoskeletal injuries, rehabilitation, strength and conditioning, and more. The text uses 18 chapters divided across five sections to cover all the material. Section I has four chapters that present the anatomy and physiology concepts most relevant to kinesiology such as body orientation; terminology; and the skeletal, muscular, and nervous organ systems. Section II is divided into three chapters on the bones and their landmarks. The final three sections contain the muscle chapters: One section for the lower extremities, one for the axial skeleton, and one for the upper extremities. The chapters are divided by regions (i.e. ankle, knee, shoulder, etc.).
