pearson my world geography 6th grade: Reading Actively in Middle Grade Social Studies Don K. Philpot, 2019-08-14 Middle grade students can learn a great deal about themselves and their world by reading informative texts in social studies courses. These texts will focus on important topics in history, geography, civics, government, and economics and offer students a range of perspectives on past and present social events. But reading is a complex act, and most students need specific reading-related support to understand assigned texts in middle grade social studies courses. This book focuses on the cyclical nature of reading, the actions proficient readers engage in to understand social studies textbooks and other informational texts, and the instructional support that teachers can provide to enhance middle grade students' learning of social studies content through reading. Three associated questions will be addressed in this book: •What actions do proficient readers engage in to understand assigned course texts? •What do these actions entail, and how do they relate to each other? •What teacher-mediated practices best support middle grade students' development as proficient readers and enhance their learning of course content through reading?

pearson my world geography 6th grade: GIS Integrated Teaching on Secondary School Underachieving Students' Geography Learning Goals Soon Singh A/L Bikar Singh, 2021-06-28

Recent studies show that the number of students who select to study Geography in Malaysian secondary schools, and their level of achievement in the subject, has decreased. The main factor is lack of motivation. Over multiple decades, a large and growing body of literature has indicated that ICT enhances students' motivation to learn and their learning outcome. The studies demonstrate that the use of ICT in teaching activities provides more fun in an authentic learning environment, and increases learning autonomy, interaction, and collaboration. It is, therefore, a rich opportunity for motivating students to study. In addition, despite an increased interest among scholars to investigate the impact of ICT integrated Geography teaching on students' motivation and achievement, none have investigated the effects of GIS as a new technological teaching tool on students' Geography learning goals and their learning outcomes. The idea for this book originated from the author's PhD study to examine the effects of GIS-based instruction on secondary school student Geography learning goals and their learning outcomes. This book is highly beneficial for Geography teachers to use multiple teaching methods and pedagogies in a GIS integrated teaching environment to cultivate underachieving students' mastery goal, performance-approach goal and learning, and to decrease avoidance behaviour in learning the subject. Although GIS is widely used in Malaysia, it has not been embraced by the Malaysian education system and is absent from the Geography curriculums in the primary and secondary school contexts. Hence, writing of this book will also help the Curriculum Development Centre and Ministry of Education Malaysia develop a GIS-based teaching module to enhance the learning motivation of Geography and improve the student level of achievement.
