offering an excellent foundation for exploration and discussion of these issues. It focuses first on the 2,500-year legacy of the just war theory and its application through history. psychology eighth edition in modules: *"Destined to Fail"* Julia Eklund Koza, 2021-08-31 A little-known fact about the prominent US psychologist and educator Carl E. Seashore (1866-1949) is that he was deeply involved in the American eugenics movement. He was among the US academics to support eugenics long before German Nazis embraced it. A titan in a host of disciplines and a proponent of radical education reform, Seashore used his positional power to promote a constellation of education reforms consistent with central precepts of eugenics. Many of these reforms, including tracking, gifted and talented programs, and high-stakes standardized testing, were adopted and remain standard practice in the United States today. He promulgated the idea that musical talent is biologically inheritable, and he developed the first standardized tests of musical talent; these tests were used by early-twentieth-century researchers in their attempts to determine whether there are race differences in musical talent. Seashore's ideas and work profoundly shaped music education's research trajectory, as well as enduring "commonsense" beliefs about musical ability. An intersectional analysis, *"Destined to Fail"* focuses on the relationship between eugenics and Seashore's views on ability, race, and gender. Koza concludes that Seashore promoted eugenics and its companion, euthenics, because he was a true believer. She also discusses the longstanding silences surrounding Seashore's participation in eugenics. As a diagnosis and critique of the present, *"Destined to Fail"* identifies resemblances and connections between past and present that illustrate the continuing influence of eugenics—and the systems of reasoning that made early-twentieth-century eugenics imaginable and seem reasonable—on education discourse and practice today. It maps out discursive, citational, and funding connections between eugenicists of the early twentieth-century and contemporary White supremacists; this mapping leads to some of Donald Trump's supporters and appointees.

psychology eighth edition in modules: Striving for the Whole Jaan Valsiner, 2017-09-08

This unusual collection explores the development of ideas in psychology's past, and shapes them into a valuable resource for ideas in the discipline's future, with particular emphasis on holistic traditions in psychology. Diriwochter and Valsiner focus on developmental holistic psychology as advocated by the second school of Leipzig in Germany. Although largely neglected, this school of thought has provided some of the fundamental ideas necessary for a truly holistic approach in psychology. This volume includes Leibniz's dynamic holism and Ehrenfels' discussion about Gestalt qualities, which has generally been acknowledged as a major milestone in the formation of Gestalt psychology. Each chapter looks at the possible future of holistic psychology. Striving for the Whole contains several well-thought out discussions on possible elaborations of holistic psychology by contrasting it with Ernst Boesch's cultural psychology, Pierre Janet's theory on emotions, and Jan Smuts holistic approach to personality theory. Discussions of holistic approaches in biology and evolutionary psychology, as well as a renewed look at Lloyd Morgan's comparative methodology, complete the volume. Striving for the Whole has been written by an international group of authors and will be of interest to students of the social sciences and intellectual history, and anyone who wants to dive deeper into holistic approaches that maintain their ties with empirical methodology. It is ideal for graduate and upper-level undergraduate courses in psychology.
