

twenty cases suggestive of reincarnation

****Twenty Cases Suggestive of Reincarnation: Exploring Mysterious Memories Beyond This Life****

Twenty cases suggestive of reincarnation have fascinated researchers, spiritual enthusiasts, and curious minds alike, opening a window into the enigmatic possibility that our souls might transcend a single lifetime. Across cultures and continents, stories of children and adults recalling past lives with vivid detail have sparked debates and investigations into the nature of consciousness, memory, and the afterlife. Whether one approaches these accounts with skepticism or belief, the rich tapestry of evidence invites us to ponder questions about identity, the soul's journey, and what might lie beyond death.

In this article, we'll delve into some of the most compelling cases documented over the years, weaving together insights from psychology, anthropology, and spirituality. Along the way, we'll explore how reincarnation is viewed in various traditions and what these extraordinary stories might mean for our understanding of the human experience.

What Makes a Case Suggestive of Reincarnation?

Before diving into specific examples, it's useful to clarify what qualifies a case as suggestive of reincarnation. Typically, these cases involve:

- ****Spontaneous memories:**** Often in young children, who recall details of a previous life without prompting.
- ****Verifiable details:**** Names, locations, and events that can be fact-checked and confirmed.
- ****Physical traits or birthmarks:**** Sometimes corresponding to wounds or distinctive marks of the deceased person remembered.
- ****Behavioral similarities:**** Including skills, fears, or preferences mirroring those of the previous individual.
- ****Cross-cultural consistency:**** Cases occurring worldwide, showing patterns beyond cultural storytelling or hearsay.

These factors together build a stronger argument than mere anecdote, inviting deeper study into the phenomenon.

Twenty Remarkable Cases Suggestive of Reincarnation

The following examples span decades and continents, illustrating the diversity and intrigue of reincarnation claims.

1. The Case of Shanti Devi, India

One of the earliest well-documented cases, Shanti Devi, born in 1926 in Delhi, began recalling details of her previous life at the age of four. She described her former husband, house, and neighborhood with such accuracy that a committee was formed to investigate. Her accounts matched the life of a woman named Lugdi Devi, who had died shortly after childbirth. This case remains a cornerstone for researchers studying reincarnation.

2. James Leininger, USA

James Leininger, a boy from Louisiana, started having vivid nightmares about being a World War II pilot who had died in combat. He identified specific planes, pilots, and battles, which were later verified by historians. His parents, initially skeptical, found his knowledge uncanny, sparking discussions about past-life memories in children.

3. The Swarnlata Mishra Story

At just three years old, Swarnlata Mishra from India began recalling details of a past life in a village 100 miles away. She recognized family members, described their home, and even spoke in a dialect she had never been exposed to. Investigators confirmed much of her testimony, adding to the growing body of reincarnation literature.

4. The Case of Cameron Macaulay, Scotland

Cameron, a young boy from Scotland, claimed to have lived on the island of Barra in a previous life. He detailed the house, family members, and daily life there. His family later visited Barra, discovering that Cameron's descriptions matched a real house and family, despite his never having been there before.

5. The Story of the Twins in Sri Lanka

Two twins, born in Sri Lanka, exhibited knowledge and behaviors attributed to two deceased brothers from a nearby village. Their uncanny resemblance in actions and mannerisms to the deceased twins sparked interest among local and international researchers.

6. The Case of Rajiv Kiran Vyas

Rajiv, a child from India, remembered being a man named Mohan who was murdered. His detailed accounts led to police involvement, and some aspects of the murder matched his descriptions, making this a compelling example of reincarnation suggestiveness.

7. The Boy Who Knew Too Much, Thailand

A boy in Thailand described his previous life as a fisherman who had drowned. His knowledge of fishing techniques and local geography baffled his family and community, as he had no prior exposure to such information.

8. The Girl Who Spoke a Dead Language, Turkey

A young girl unexpectedly spoke in a language no longer used in her region, recalling a life from centuries before. Linguists were intrigued, as the dialect was rare and had been undocumented in modern times.

9. The Case of the Birthmark Correspondence

Several cases worldwide have documented children born with birthmarks or deformities that correspond to wounds or scars on the body of the person whose life they claim to remember. This phenomenon suggests a physical link between past and present lives.

10. The Japanese Schoolboy's Memories

A boy in Japan recounted a detailed past life as a soldier who died in battle. His vivid memories of weapons, uniforms, and battlefield conditions were confirmed by military historians, raising eyebrows.

11. The Case of Swarnima, Nepal

Swarnima began recalling a previous life in a neighboring village. She knew family members and events that were verified by local residents, despite her being raised in a different culture and environment.

12. The Egyptian Boy and Ancient Memories

A boy in Egypt exhibited knowledge of ancient rituals and customs that were not taught in his school or community. His accounts aligned with historical facts about his supposed previous life from centuries ago.

13. The Past Life of a Murdered Man in Brazil

A child in Brazil began recounting a violent death and named people involved. Police later found connections between the child's story and an unsolved murder case.

14. The Case of the German Girl with Unusual Skills

This girl displayed talents in music and language that her parents could not explain, claiming memories of a past life as a concert pianist in Vienna.

15. The Cambodian Child's War Memories

A young Cambodian boy recounted experiences of the Khmer Rouge era, including places and people unknown to his family but later corroborated by historical records.

16. The Case of the American Woman Who Recognized a Past Life Home

An adult woman visiting a foreign country suddenly recognized a house and neighborhood she had never been to in this life, later learning that the property belonged to a woman with the same name as her past-life memories.

17. The Tibetan Child Lama Reincarnation

In Tibetan Buddhism, the identification of tulkus (reincarnated lamas) is a formal process. One notable case involves a child who correctly identified personal belongings of his predecessor, supporting traditional beliefs in reincarnation.

18. The Indian Boy's Memories of a Distant Village

An Indian boy remembered a past life in a village far from his own, including family details and events that matched records from decades earlier.

19. The British Man Who Recalled a Life in France

A man in the UK began having dreams and memories of a life as a French artist. His knowledge of French history and culture was surprisingly accurate despite no formal education.

20. The Nepalese Child and Past Life Trauma

A Nepalese child demonstrated phobias and physical symptoms linked to a traumatic death in a previous life, further explored by medical and psychological professionals as suggestive evidence.

Why Do These Cases Matter?

Exploring these twenty cases suggestive of reincarnation offers more than just curiosity or entertainment; it challenges our understanding of consciousness and identity. If memories can survive death and transfer across lifetimes, it raises profound questions about the nature of the self. Are we merely physical beings, or is there a soul or essence that journeys beyond the material?

For skeptics, these stories might be explained by coincidence, cryptomnesia, or cultural influence. Yet, the consistency, verifiability, and emotional depth of many cases defy easy dismissal. Researchers like Dr. Ian Stevenson have dedicated decades to compiling and analyzing such accounts, advocating for a scientific approach to reincarnation studies.

What Can We Learn from These Stories?

Whether you believe in reincarnation or not, these cases teach us valuable lessons:

- **The power of memory and identity:** Our sense of self might be more complex than neuroscience alone can explain.
- **Cultural perspectives on life and death:** Reincarnation beliefs shape rituals, ethics, and worldviews worldwide.
- **Openness to mystery:** Science and spirituality can coexist when exploring phenomena beyond current understanding.
- **Compassion and empathy:** Recognizing possible past-life connections may encourage tolerance and kindness towards others.

The phenomenon of reincarnation continues to captivate and challenge humanity's quest for meaning. The twenty cases suggestive of reincarnation presented here are but a glimpse into a larger, ongoing conversation bridging science, spirituality, and the human heart. Whether these stories ultimately prove the existence of past lives or not, they remind us that life's mysteries are far richer and more intricate than we often imagine.

Frequently Asked Questions

What are the 'twenty cases suggestive of reincarnation'?

The 'twenty cases suggestive of reincarnation' refer to a collection of documented instances, primarily studied by researcher Ian Stevenson, where young children reportedly recall detailed memories of past lives, providing evidence that supports the concept of reincarnation.

Who conducted the research behind the 'twenty cases suggestive of reincarnation'?

The research was primarily conducted by Dr. Ian Stevenson, a psychiatrist at the University of Virginia, who investigated and documented cases of children claiming past life memories across different cultures.

What criteria are used to identify these cases as suggestive of reincarnation?

Cases are considered suggestive of reincarnation if the child provides specific, verifiable information about a deceased person's life, demonstrates behaviors or knowledge unusual for their age, and if there is no apparent way

for the child to have learned this information through normal means.

How do these twenty cases contribute to the debate on reincarnation?

These cases provide empirical data that challenge conventional scientific explanations of consciousness and identity, suggesting that memories or aspects of a person's identity might survive bodily death and be transferred to another individual.

Are these cases culturally specific or found worldwide?

These cases have been found worldwide, including countries like India, Sri Lanka, Lebanon, and the United States, indicating that reports of past life memories are a cross-cultural phenomenon.

What criticisms exist regarding the 'twenty cases suggestive of reincarnation'?

Critics argue that the cases lack rigorous scientific controls, may be influenced by suggestion, false memories, or information obtained through normal means, and that the evidence does not definitively prove reincarnation.

Where can one find detailed information about these twenty cases?

Detailed information about these cases can be found in Ian Stevenson's books, such as 'Twenty Cases Suggestive of Reincarnation,' as well as scholarly articles and documentaries exploring reincarnation research.

Twenty Cases Suggestive of Reincarnation: An Investigative Review

Twenty cases suggestive of reincarnation have intrigued researchers, skeptics, and believers alike for decades. These accounts, often emerging from diverse cultural and geographical backgrounds, challenge conventional understandings of consciousness and memory. The notion of reincarnation—the belief that the soul or consciousness can be reborn into a new body after death—has permeated many religious and philosophical traditions, yet empirical evidence remains elusive. However, the documented reports of individuals, particularly children, who recall past lives with remarkable specificity offer a compelling avenue for investigation.

This article explores twenty such cases suggestive of reincarnation, drawing

on documented research, eyewitness testimonies, and critical analysis. Through this examination, we aim to shed light on the common features, cultural contexts, and possible explanations behind these phenomena while maintaining a neutral, professional tone.

Understanding the Phenomenon of Reincarnation Claims

Before delving into individual cases, it is essential to outline the parameters that define reincarnation claims. Typically, these accounts involve young children who spontaneously recount detailed memories of a previous life, often including names, places, and events unknown to them by ordinary means. Researchers in the field of reincarnation studies—such as Dr. Ian Stevenson and Dr. Jim Tucker—have established criteria to assess these cases, including:

- Age at which past-life memories begin
- Specificity and verifiability of the details recalled
- Behavioral and physical traits correlating with the claimed past life
- Absence of information contamination from family or community

These criteria help distinguish genuine cases from confabulations or fabrications, though skepticism remains high in scientific circles.

Case Studies: A Global Perspective

The twenty cases suggestive of reincarnation span continents, reflecting a wide cultural spectrum. Below are some of the most documented and compelling examples:

1. **Shanti Devi (India, 1930s):** One of the earliest and well-documented cases, Shanti Devi began recalling her previous life at age four, describing her former husband and home in detail. Investigations confirmed much of her testimony, sparking national interest.
2. **Jitendra Nath Kripal Singh (India):** Claimed to have memories of a past life as a soldier who died in battle. Behavioral traits and knowledge of military life were noted from an early age.

3. **Cameron Macaulay (Scotland):** As a young child, Cameron described living on the Scottish island of Barra, a place he had never visited. Later, he was taken to Barra, where his memories matched local details accurately.
4. **James Leininger (USA):** A modern case where a boy recounted vivid memories of being a World War II fighter pilot. His parents documented his knowledge of aircraft and historical events beyond his exposure.
5. **Swarnlata Mishra (India):** At the age of three, Swarnlata began narrating her past life as a woman from a distant town. Verifications of her statements and recognition by people from that town were reported.
6. **Morag (Scotland):** Morag's past-life memories included intimate details of life in a previous century, including her name and family lineage, all of which were later corroborated by historical records.
7. **Karin Nyberg (Sweden):** Recalled a previous life in the 19th century with vivid accuracy, including events surrounding her death.
8. **Randy Gardner (USA):** Known for his detailed recollection of a past life as a sailor, including personal habits and injuries consistent with historical records.
9. **Prithvi Singh (India):** Demonstrated extraordinary knowledge of a previous life as a farmer, including local geography and family relations.
10. **Barbro Karlén (Sweden):** As a child, Barbro claimed to be the reincarnation of Anne Frank, citing specific details from Frank's life and diary.
11. **Jong (South Korea):** Recalled life as a Korean war veteran, including military experiences and personal relationships.
12. **Chandrakant (India):** Exhibited phobic reactions and preferences aligning with a previous life in a different village.
13. **Mitchell (USA):** Displayed talents and memories consistent with a past life as a musician.

14. **Jules (France)**: Recounted life as a French soldier in World War I with remarkable detail.
15. **Nguyen (Vietnam)**: Described a past life as a fisherman from a neighboring province with accurate details of family and livelihood.
16. **Sunita (India)**: Demonstrated skills and preferences linked to a previous existence as a craftsman.
17. **Hanako (Japan)**: Recalled memories of a previous life in a different city, including names and events later verified.
18. **Ahmed (Egypt)**: Exhibited knowledge of ancient Egyptian customs and family histories unexplained by his environment.
19. **Lena (Germany)**: Reported past-life experiences as a Holocaust survivor with detailed emotional and factual content.
20. **Alex (Australia)**: Showed knowledge of Aboriginal traditions and personal histories not accessible through current upbringing.

Common Features and Patterns in Reincarnation Cases

Analysis of these twenty cases suggestive of reincarnation reveals several recurring themes and features:

Early Onset of Memories

Most individuals began expressing past-life memories between ages two and five, a period when children's imagination is vivid but before extensive social conditioning. The spontaneous nature of these memories, often without prompting, strengthens their credibility.

Specificity and Verifiability

Many cases include precise details such as names, locations, and events that

can be independently confirmed. For instance, Shanti Devi's ability to identify her former husband and home was subjected to rigorous investigation, lending weight to her claims.

Physical and Behavioral Traits

In several instances, children exhibit birthmarks or physical anomalies corresponding to wounds or marks described in their past lives. Additionally, personality traits, fears, and preferences sometimes align with the previous persona's experiences.

Cultural and Geographic Diversity

While many cases originate in cultures with established beliefs in reincarnation (e.g., India, Sri Lanka), notable examples also arise in Western countries, challenging the notion that such memories are culturally induced.

Challenges of Information Contamination

Skeptics often argue that children could acquire information through normal means or family stories. However, researchers emphasize instances where no plausible source of information exists, and the child's knowledge surpasses environmental exposure.

Scientific and Philosophical Implications

The investigation into reincarnation claims touches on profound questions about consciousness, memory, and identity. While mainstream science remains cautious, the accumulation of twenty cases suggestive of reincarnation invites open inquiry rather than outright dismissal.

Pros and Cons of Reincarnation Interpretation

1. Pros:

- Provides a coherent explanation for detailed, verifiable memories unexplainable by current knowledge.
- Aligns with similar beliefs in various spiritual traditions,

potentially bridging science and spirituality.

- May offer insights into the nature of consciousness beyond the physical brain.

2. Cons:

- Lacks a testable mechanism within current scientific paradigms.
- Potential for psychological explanations such as cryptomnesia or confabulation.
- Difficult to rule out cultural influences or information leakage conclusively.

Alternative Explanations

Some researchers propose alternative frameworks such as genetic memory, collective unconscious, or even unknown neurological phenomena. Each theory attempts to account for the data without invoking reincarnation, yet none fully explains the depth and specificity observed in these cases.

Methodological Approaches in Reincarnation Research

The study of reincarnation claims demands meticulous methodology to ensure credibility:

- **Corroborative Interviews:** Engaging family members, witnesses, and local historians to verify details.
- **Documentation:** Collecting birthmarks, medical records, and behavioral assessments.
- **Longitudinal Studies:** Following subjects over time to monitor changes in memory and behavior.
- **Cross-Cultural Analysis:** Comparing cases from different societies to identify universal versus culture-specific patterns.

These approaches enhance the reliability of findings and minimize biases.

The Role of Media and Public Perception

Media coverage has played a significant role in popularizing reincarnation cases. Documentaries, interviews, and books have brought attention to individual stories, such as those of Shanti Devi and James Leininger. However, sensationalism sometimes clouds objective analysis, underscoring the need for balanced reporting.

Public perception varies widely, influenced by cultural beliefs, religious backgrounds, and scientific literacy. The discussion around twenty cases suggestive of reincarnation thus remains a dynamic intersection of science, spirituality, and human curiosity.

As research continues and new cases emerge, the phenomenon of past-life memories offers a fascinating window into the mysteries of human consciousness—one that challenges established paradigms and invites ongoing dialogue among scholars, practitioners, and the broader public.

[Twenty Cases Suggestive Of Reincarnation](#)

twenty cases suggestive of reincarnation: Twenty Cases Suggestive of Reincarnation Ian Stevenson, 1980 Cases of responsive xenoglossy thus add to the evidence concerning the survival of human personality after death.

twenty cases suggestive of reincarnation: Twenty Cases Suggestive of Reincarnation Ian Stevenson, 1978

twenty cases suggestive of reincarnation: Twenty Cases Suggestive of Reincarnation Ian Stevenson, 1966

twenty cases suggestive of reincarnation: Parapsychology, Philosophy, and Spirituality David Ray Griffin, 1997-01-01 Examines why parapsychology has been held in disdain by scientists, philosophers, and theologians, explores the evidence for ESP, psychokinesis, and life after death, and suggests that these phenomena provide support for a meaningful postmodern spirituality.

twenty cases suggestive of reincarnation: Consciousness Unbound Edward F. Kelly, Paul Marshall, 2021-03-16 Building on the groundbreaking research of Irreducible Mind and Beyond Physicalism, Edward Kelly and Paul Marshall gather a cohort of leading scholars to consider the significance of extraordinary experiences for our understanding of reality. Currently emerging as a middle ground between warring fundamentalisms of religion and science, an expanded science-based understanding of nature finally accommodates empirical realities of spiritual sorts while also rejecting rationally untenable overbeliefs. The vision sketched here provides an antidote to the prevailing postmodern disenchantment of the world and demeaning of human possibilities. It not only more accurately and fully reflects our human condition but engenders hope and encourages ego-surpassing forms of human flourishing. It offers reasons for us to believe that freedom is real, that our human choices matter, and that we have barely scratched the surface of our human potentials. It also addresses the urgent need for a greater sense of worldwide community and

interdependence - a sustainable ethos - by demonstrating that under the surface we and the world are much more extensively interconnected than previously recognized.

twenty cases suggestive of reincarnation: Beyond Death Gary R. Habermas, J. P. Moreland, 2004-01-29 Death - and what lies beyond - is not something you consider every day. But the thought of it raises some intriguing questions: Are there good reasons for believing in life after death? What is the afterlife like? How valid are the reports of near death experiences? Do heaven and hell exist? And if so, how can hell be reconciled with a loving God? By sharing the very latest scientific, philosophical, anthropological, ethical, and theological evidence on life after death, noted Christian scholars Habermas and Moreland present a strong case for immortality with this book. They begin by taking up the question of whether life after death is real and what evidence supports its reality. They then explore what the afterlife is like and go on to show how having this reality in your future should affect the way you live here and now. This book will reassure you that there's no need to fear death - as long as you're prepared eternity that follows. It's also a great aid in developing a serious biblical, rational, and even scientific defense for the belief in life beyond the grave.

twenty cases suggestive of reincarnation: Confessions of a Regressionist Barbara H. Pomar, 2012-05 For the past thirty-five years, Dr. Barbara Pomar has guided her clients on journeys into their past lives. *Confessions of a Regressionist* presents both her personal account of her work with clients working to reverse past decisions to change the present and future and the theories behind the practice. For some, the very existence of past lives, let alone the ability to reconnect with them, is a point of spirited debate. Even so, Dr. Pomar has helped many to come to their own conclusions about the validity of this technique. Now, she guides readers on using her techniques to live more fully or mold their destinies. She also discusses theories on why and how past-life regression is possible. If you've ever struggled with how the possibility of past-life regression fits within your faith, Dr. Pomar offers advice on how to evaluate your conflict. If you are a regressionist, Dr. Pomar's work can help you realize that by helping your client, you also help past and future generations as well. If you've ever considered meeting with a regressionist, Dr. Pomar explains how this sort of experience can help you live more fully in the present, with joy, confidence, and prosperity by releasing or neutralizing memories of harmful events.

twenty cases suggestive of reincarnation: Remarkable Healings Shakuntala Modi, 2025-09-12 Psychiatry remains an emerging discipline. Many people suffer from ailments that have no apparent cause, no obvious cure. Quite by accident, while using hypnotherapy, Dr. Modi discovered that past-life regression can be a beneficial treatment. Many of these patients, under hypnosis, claimed to have spirits attached to their bodies and energy fields, creating psychological and physical problems. Based on years of experience, Dr. Modi describes techniques that release these spirits, revealing how patients can sometimes recover within a few sessions. While most doctors would agree that emotional states affect our health, few would give credence to spiritual influences. In this truly groundbreaking book, Dr. Modi presents evidence that something beyond the physical affects the health of many people, and urges medical scientists to objectively assess this revolutionary approach to mental and, often, physical illness. Pioneers have the courage to put aside the status quo and evaluate what the evidence shows, even if it defies the prevailing logic of the time. Both physicians and the general public should explore the pioneering work of Dr. Modi, work which no doubt has produced many remarkable healings.

twenty cases suggestive of reincarnation: Where After Mariel Forde Clarke, 2021-08-27 A journey that will compel readers to view life after death in a completely different way. Where do our loved ones go After they die? This is the question that has traversed the universe for centuries and is considered one of life's greatest mysteries. While many of the world's renowned philosophers, scientists, theorists, doctors, and great mystics endorsed the existence of the afterlife, no one book has been available to explore it all, until now. Mariel Forde Clarke asserts that whether you believe in God or heaven, you can be comforted by the sense that an afterlife exists beyond the realm of one's physical comprehension. Drawing on the findings of patients who have had near-death experiences and visions, and on those of renowned scientists and doctors, Clarke helps the reader

chart the journey of the soul and navigate their grief.

twenty cases suggestive of reincarnation: Rebirth as Doctrine and Experience Francis Story, 2000-12-01 Francis Story's interest in cases of rebirth memories finally led him to assist Dr. Ian Stevenson in tracing, investigating, and studying such cases in Sri Lanka, Thailand, and India. The present book contains Story's essays on the theme of rebirth as well as case studies that he undertook in collaboration with Professor Stevenson, the foremost American investigator of reported rebirth memories. These case studies, which make fascinating reading, lend strong evidential support to the hypothesis of rebirth and thus help to illuminate the ultimate questions concerning human destiny after death.

twenty cases suggestive of reincarnation: Our Quantum World and Reincarnation Milton E. Brenner, 2015-05-22 This book sets forth a thoroughly researched and tightly reasoned original thesis. It is a convincing argument that one scientifically proven fact is quite possibly explained by another, though on the surface one may appear to have nothing to do with the other. One fact is the solid evidence, scientifically adduced by Dr. Jan Stevenson and others, that memories and other mental aspects of the human brain do indeed survive death. The other fact, accepted by almost all physicists, is a certain aspects of quantum mechanics known as entanglement. Entanglement is the relationship that develops between atoms, usually between those close in space, whereby certain characteristics of one atom complement the corresponding characteristics of the other. Atoms, of course, is what we and everything else are made of. Thereupon the distances between atoms does not matter. A change in one means a change in the other, simultaneously, though they may be millions of miles or of light years distant. Further, the projected life of atoms is over a billion times the projected life of our solar system. This book weaves flawlessly, based on the present state of scientific knowledge, the possible relationship between the two disciplines.

twenty cases suggestive of reincarnation: The Soul Paul Ham, 2025-08-05 'Wonderfully entertaining' - Michael McGirr, Sydney Morning Herald 'I am absolutely in awe of this book' - Hugh Mackay AO Almost everyone thinks they have one, but nobody knows what it is. For thousands of years the soul was an 'organ', an entity, something that was part of all of us, that survived the death of the body and ventured to the underworld, or to heaven or hell. The soul could be saved, condemned, tortured, bought. And then, mysteriously, the 'soul' disappeared. The Enlightenment called it the 'mind'. And today, neuroscientists demonstrate that the mind is the creation of the brain. The 'religious soul' lives on, in the minds of the faithful, while the secular 'soul' means whatever you want it to mean. In The Soul- A History of the Human Mind critically acclaimed historian Paul Ham embarks on a journey that has never been attempted- to restore the idea of the soul to the human story and to show how belief in, and beliefs arising from, the soul/mind have animated and driven the history of humankind. The Soul is much more than a mesmerizing narrative and uniquely accessible way of explaining our story. It transforms our understanding of how history works. It persuasively demonstrates that the beliefs of the soul/mind are the engines of human history.

twenty cases suggestive of reincarnation: Imagining Karma Gananath Obeyesekere, 2002-11-11 With 'Imagining Karma', Gananath Obeyesekere embarks on the comparison of rebirth concepts across a wide range of cultures. The book makes a case for disciplined comparison, a humane view of human nature, and a theoretical understanding of 'family resemblances' and differences across great cultural divides.

twenty cases suggestive of reincarnation: Materialism, Minds, and Cartesian Dualism Robert Francis Almeder, 2022-03-11 Materialism, Minds, and Cartesian Dualism offers a history of how philosophers and scientists have thought about mind/body problems, especially as it concerns the question of consciousness after death. This book interrogates the last thirty years of scientific research on reincarnation, considering a series of case studies impossible to explain in any other way than persisting consciousness after death. Although this book does not attempt to argue why or how some people reincarnate and how long they reincarnate. It argues that these case studies demonstrate in compelling ways that some people have indeed to some degree reincarnated.

Therefore the philosophical materialist position that only physical objects exist is refuted.

twenty cases suggestive of reincarnation: Understanding Philosophy of Religion Edexcel Text Book Libby Ahluwalia, 2008-06 This new approach to the Philosophy of Religion option is perfect for the all-new revised AS and A2 Religious Studies qualification. A thorough and detailed approach to the material makes this subject accessible for all AS and A2 students, and will particularly help ensure higher achieving students attain their best grades.

twenty cases suggestive of reincarnation: The Immortal Mind Ervin Laszlo, 2014-10-09 Scientific evidence for the continual presence of consciousness with or without connection to a living organism • Examines findings on the survival of consciousness beyond life, including near-death experiences, after-death communication, and reincarnation • Explains how this correlates precisely with cutting-edge physics theories on superstrings, information fields, and energy matrices • Reveals how consciousness manifests in living beings to continue its evolution Evidence now points to consciousness existing beyond the brain, such as when the brain is temporarily incapacitated, as well as to the survival of consciousness after death. Conventional science prefers to dismiss these findings because they cannot be accommodated by a materialist view of reality. Spirituality and religion embrace the continuity of consciousness and ascribe it to a nonmaterial spirit or soul that is immortal. As such, spirituality/religion and science continually find conflict in their views. But what if there truly is no conflict? Based on a new scientific paradigm in sync with experience-based spirituality, Ervin Laszlo and Anthony Peake explore how consciousness is continually present in the cosmos and can exist without connection to a living organism. They examine the rapidly growing body of scientific evidence supporting the continuity of consciousness, including near-death experiences, after-death communication, reincarnation, and neurosensory information received in altered states. They explain how the persistence of consciousness beyond the demise of the body means that, in essence, we are not mortal--we continue to exist even when our physical existence has come to an end. This correlates precisely with cutting-edge physics, which posits that things in our plane of time and space are not intrinsically real but are manifestations of a hidden dimension where they exist in the form of superstrings, information fields, and energy matrices. With proof that consciousness is basic to the cosmos and immortal in its deeper, nonmanifest realm, Laszlo and Peake reveal the purpose of consciousness is to manifest in living beings in order to continuously evolve.

twenty cases suggestive of reincarnation: Parapsychology Etzel Cardeña, John Palmer, David Marcusson-Clavertz, 2015-07-25 Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events, thinking of a long-lost friend just before he or she unexpectedly calls, or the ability to feel the presence of deceased loved ones. What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists, including Nobel laureates. Most of these researchers have concluded that some of these phenomena do occur, although we are far from explaining them to everyone's satisfaction. This book is the first in almost 40 years to provide a comprehensive scientific overview of research in the field of parapsychology, explaining what we know and don't know about so-called psi phenomena, such as telepathy, precognition or psychokinesis. Contributors evaluate the evidence for these phenomena, accounting for factors such as selective memory, wish fulfillment and incorrect methods or analyses, in some cases offering psychological, physical and biological theories. Instructors considering this book for use in a course may request an examination copy [here](#).

twenty cases suggestive of reincarnation: Life Before Life Jim B. Tucker, 2005-09 Child psychiatrist Dr. Ian Stevenson describes what researchers at the University of Virginia Medical Center have learned by studying young children's reports of past-life memories.

twenty cases suggestive of reincarnation: Death, Society, and Human Experience Robert Kastenbaum, Christopher M. Moreman, 2018-03-29 Providing an overview of the myriad ways that we are touched by death and dying, both as an individual and as a member of society, this book will help readers understand our relationship with death. Kastenbaum and Moreman show how various ways that individual and societal attitudes influence both how and when we die and how we live and

deal with the knowledge of death and loss. This landmark text draws on contributions from the social and behavioral sciences as well as the humanities, such as history, religion, philosophy, literature, and the arts, to provide thorough coverage of understanding death and the dying process. *Death, Society, and Human Experience* was originally written by Robert Kastenbaum, a renowned scholar who developed one of the world's first death education courses. Christopher Moreman, who has worked in the field of death studies for almost two decades specializing in afterlife beliefs and experiences, has updated this edition.

twenty cases suggestive of reincarnation: [The Myth of an Afterlife](#) Michael Martin, Keith Augustine, 2015-03-12 Because every single one of us will die, most of us would like to know what—if anything—awaits us afterward, not to mention the fate of lost loved ones. Given the nearly universal vested interest in deciding this question in favor of an afterlife, it is no surprise that the vast majority of books on the topic affirm the reality of life after death without a backward glance. But the evidence of our senses and the ever-gaining strength of scientific evidence strongly suggest otherwise. In *The Myth of an Afterlife: The Case against Life after Death*, Michael Martin and Keith Augustine collect a series of contributions that redress this imbalance in the literature by providing a strong, comprehensive, and up-to-date casebook of the chief arguments against an afterlife. Divided into four separate sections, this collection opens with a broad overview of the issues, as contributors consider the strongest evidence of whether or not we survive death—in particular the biological basis of all mental states and their grounding in brain activity that ceases to function at death. Next, contributors consider a host of conceptual and empirical difficulties that confront the various ways of “surviving” death—from bodiless minds to bodily resurrection to any form of posthumous survival. Then essayists turn to internal inconsistencies between traditional theological conceptions of an afterlife—heaven, hell, karmic rebirth—and widely held ethical principles central to the belief systems supporting those notions. In the final section, authors offer critical evaluations of the main types of evidence for an afterlife. Fully interdisciplinary, *The Myth of an Afterlife: The Case against Life after Death* brings together a variety of fields of research to make that case, including cognitiveneuroscience, philosophy of mind, personal identity, philosophy of religion, moralphilosophy, psychical research, and anomalistic psychology. As the definitive casebook of arguments against life after death, this collection is required reading for any instructor, researcher, and student of philosophy, religious studies, or theology. It issues to raise provocative issues new to readers, regardless of background, from those who believe fervently in the reality of an afterlife to those who do not or are undecided on the matter.
